

## ***Mark Your Calendars TASME 2008***

**12th Annual Conference and Workshop on  
Technological Advances in Science, Medicine and  
Engineering**

**Saturday July 5th, 2008**

The Hospital For Sick Children  
Toronto, Ontario. Canada

Within the last two years advancement in science and engineering have greatly impacted growth in medicine and protection of the environment. Nanoengineered materials are expected to affect the bio-systems of all scales, energy production and the current disposal practices of wastes. Advanced instrumentation and measurements have helped to detect health to environmental problems much earlier than in the past and help in the remedial process.

This one day Conference and Exhibition will facilitate scientists, engineers and medical professionals from the public and private sectors, to present their recent findings and experiences with fellow researchers. It will assemble researchers from various scientific disciplines and industry to foster collaborative projects.
